

FELIPE NOVAIS

Senior Data Engineer | AWS Data Platforms, Analytics Engineering & Power BI

Brasília, Brazil (Remote) | fellipen17@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Data Engineer with 5+ years building cloud-native pipelines, warehouses, and analytics platforms end to end, from source-system ingestion through to consumption in reporting tools and business applications. Hands-on AWS experience with Lambda, S3, Glue, and CloudFormation for event-driven ingestion and infrastructure automation, combined with deep Snowflake and dbt expertise in dimensional modeling. Proven record integrating complex multi-source enterprise systems (Oracle Fusion HCM, CMiC) into governed warehouses that feed Power BI reporting with the quality, consistency, and timeliness the business depends on. Operates with high autonomy, owns committed delivery dates, and communicates technical trade-offs to product and business stakeholders. Fluent English (B2+).

CORE COMPETENCIES

AWS & Cloud Data: AWS Lambda, Amazon S3, AWS Glue, CloudFormation (infrastructure-as-code), Snowflake, BigQuery, GCP, Fivetran

Engineering & Modeling: Python for production data processing, advanced SQL (Snowflake, Oracle, and comparable relational engines), dbt (models, macros, custom tests), dimensional/Kimball modeling, ETL/ELT pipeline design, data quality diagnostics

Microsoft Ecosystem & Reporting: Power BI (semantic models, dashboards, stakeholder-facing reporting), Azure DevOps

Delivery & DevOps: Git/GitHub, Azure DevOps Pipelines, CI/CD for data projects, agile and demand-based delivery, data governance and PII-masking documentation

EXPERIENCE

Data Engineer — AICG / BRF Consulting

Dec 2025 – Present

Remote — (Oracle Fusion HCM / CMiC integration into Snowflake)

- Own end-to-end data workflows from source ingestion to consumption, delivering Snowflake models that feed Power BI reports used across HR and operations.
- Design and build dimensional models in Snowflake integrating Oracle Fusion HCM and CMiC source systems for HR and operations reporting.
- Develop dbt models, macros, and custom tests creating dimensions and facts following data warehousing best practices.
- Partner with business and product stakeholders to gather data requirements and evaluate source systems, defining a standardized intake process for new reporting requests.
- Produce field-mapping and data governance documentation reconciling two enterprise source systems.
- Manage version control and CI workflows for the warehouse codebase in Azure DevOps.

Data Engineer — Redpill Analytics

Aug 2021 – Mar 2026

Remote

- Built and optimized ingestion pipelines on AWS using Glue, Lambda, and S3 alongside Fivetran connectors, including event-driven jobs triggered by S3 object events.
- Automated infrastructure provisioning and deployment with AWS CloudFormation across development, staging, and production.
- Designed and maintained analytics-ready models in Snowflake using dbt across multiple client engagements.
- Implemented CI/CD workflows for data projects with Git and GitHub.

Internship Trainee — BRB

Apr 2021 – Jun 2022

- Supported development and maintenance of internal systems, and monitored production logs and transactional systems.

EDUCATION

Bachelor's in Computer Science — UNICEUB

Jul 2018 – Jul 2023

Programming, data structures, algorithms, databases, and software engineering.

CERTIFICATIONS

- dbt Developer — September 2024
- DevOps Essentials Professional Certificate (DEPC) — January 2019
- Scrum Foundation Professional Certificate (SFPC) — January 2019

LANGUAGES

Portuguese: Native/Fluent

English: Fluent (B2+)
